

PROJECT REPORT

Name: Yash Gupta

Registration Number: 25BCE10190

Branch: B.Tech (CSE core)

Year: 1st Year

Course Code: CSE0001 – Digital Literacy

Date: 30 march 2026

Introduction

In today's world, digital literacy has become an essential skill for students. From attending classes to submitting assignments and building a career, almost everything depends on digital platforms. This project was designed to help us understand how to use digital tools effectively, communicate professionally, and stay safe online.

As part of this project, I worked as a "Student Digital Ambassador" and completed five different tasks related to digital awareness. These tasks helped me learn about creating an infographic, building a professional digital profile, exploring coding platforms, writing professional emails, and understanding cybercrime.

Through this project, I not only gained practical knowledge but also improved my confidence in using digital tools responsibly.

Task 1: Digital Literacy Infographic

In Task 1, I created a digital literacy infographic using Canva. The main aim of this task was to present important information in a simple and visually appealing way.

My infographic included four main sections: the meaning of digital literacy, useful digital tools for students, safe internet practices, and basic email etiquette. I used short points instead of long paragraphs so that the content could be easily understood at a glance. I also added icons related to security, communication, and technology to make the design more attractive.

While creating the infographic, I faced some difficulty in selecting a suitable template and organizing the content properly without making it look crowded. However after trying a few layouts I was able to create a clean and balanced design.

This task helped me understand how to present information effectively using digital tools and improved my creativity and design skills.

Task 2: Digital Portfolio

In Task 2, I created my digital portfolio using platforms like GitHub, LinkedIn, and Kaggle. The purpose of this task was to build a professional online presence.

On GitHub, I created my profile and added a README file that includes my basic information such as my name, branch, and learning goals. This platform will help me store and showcase my projects in the future. On LinkedIn, I completed my profile by adding my education details, which will help me connect with professionals and explore opportunities. I also created an account on Kaggle to understand how it can be used for learning and practicing skills.

Initially, I was not very familiar with these platforms, but this task helped me explore them step by step. In the coming years, I plan to regularly update my GitHub with projects, use LinkedIn for networking, and practice on Kaggle to improve my skills.

Task 3: Coding & Collaboration Platforms

In Task 3, I explored both a coding platform and a collaboration tool. For coding practice, I used HackerRank and solved a beginner-level problem. This helped me understand how online coding platforms work and how problems are solved step by step.

For the collaboration part, I created a quiz using Google Forms. The quiz was based on digital literacy and included five questions, such as multiple-choice and short-answer questions. I also linked the form to a Google Sheet to view and manage responses.

While creating the form, I learned how to design questions properly and set correct answers in quiz mode. It was interesting to see how responses can be collected automatically.

This task showed me how digital tools can be used for both learning and collaboration. These platforms will be useful for conducting surveys, quizzes, and improving my technical skills in the future.

Task 4: Email Etiquette & Communication

In Task 4, I learned about professional communication and email etiquette. I wrote two emails: one requesting an assignment extension and another expressing interest in an internship opportunity. While writing these emails, I focused on maintaining a clear subject line, polite tone, and proper structure.

I also created a checklist of Do's and Don'ts for responsible social media use. This helped me understand how our online behavior can impact our image and communication.

One common problem with poor digital communication is misunderstanding due to informal or unclear messages. For example, sending an email without a proper subject or using casual language may create a negative impression. This task helped me realize the importance of being clear, respectful, and professional while communicating online.

Task 5: Cybercrime Awareness

In Task 5, I studied cybercrime, focusing on UPI fraud. I learned how scammers trick people into sharing sensitive information like UPI PINs or approving fake transactions. While researching this topic, I was surprised to see how easily such frauds can happen, especially to students.

I also created a prevention checklist with safety tips such as not sharing OTPs, verifying payment requests, and reporting fraud immediately through official channels like cybercrime.gov.in and helpline number 1930.

This task made me more aware of online risks and the importance of being cautious while using digital payment systems. One habit I will change is always verifying any suspicious message or request before taking action.

Conclusion

Overall, this project was a very useful learning experience for me. It helped me understand the importance of digital literacy in everyday life. I learned how to create content, build a professional profile, communicate properly, and stay safe online.

These skills are not only important for my academic life but will also help me in my future career. This project has increased my awareness and confidence in using digital tools responsibly.
